

Chapter 1 Study Notes

Introduction to the Human Body

LEARNING OBJECTIVES

- Introduce the disciplines of anatomy and physiology
 - Discuss the organization of the human body
 - Reveal shared properties of all living things
 - Discuss the concept of homeostasis
1. Define Anatomy and Physiology. Why is it good to look at both of these topics together?
 2. Describe how the body is organized from the molecular level to the organismal level.
 3. Compare and contrast gross anatomy vs microscopic anatomy.
 4. Create a chart that lists the organ systems in the human body and key organs for each system.
 5. What characteristics are necessary to be considered alive?
 6. Are viruses considered to be alive?
 7. What is meant by homeostasis? Give an example of how homeostasis might be imbalanced and how the body uses feedback to correct the imbalance?
 8. Compare and contrast positive and negative feedback.
 9. Describe the anatomical position of the human body in A&P.
 10. Fill out the following (not inclusive):
 11. The nose is _____ to the earlobe.
 12. The elbow is _____ to the wrist.
 13. The head is _____ to the belly button.
 14. What is the anatomical regional term for (not inclusive):
 - a. Armpit

- b. Forearm
- c. Neck
- d. Foot
- e. Hand
- f. Dorsal
- g. Head

15. List the planes and sections of the human body. Draw a general diagram that shows each of the planes and sections.
16. What are the body cavities found in the human body? List an organ that is found in each of cavity.
17. Compare and contrast the visceral layer vs the parietal layer
18. What layers surround the heart? Lungs? Abdominal cavity?
19. Know the 9 abdominal pelvic regions? Diagram the location of each region.
